## Life Insurance Options After Retirement

Life insurance can serve many valuable purposes during your life. However, once you've retired, you may no longer feel the need to keep your life insurance, or the cost of maintaining the policy may have become too expensive. In these cases, you might be tempted to abandon the policy or surrender your life insurance coverage. But there are other alternatives to consider as well.

### Lapse or surrender

If you have term life insurance, you generally will receive nothing in return if you surrender the policy or let it lapse by not paying premiums. On the other hand, if you own permanent life insurance, the policy may have a cash surrender value (CSV), which you can receive upon surrendering the insurance. If you surrender your cash value life insurance policy, any gain (generally, the excess of your CSV over the cumulative amount of premium paid) resulting from the surrender will be subject to federal (and possibly state) income tax. Also, surrendering your policy prematurely may result in surrender charges, which can reduce your CSV.

### Exchange the old policy

Another option is to exchange your existing life insurance policy for either a new life insurance policy or another type of insurance product. The federal tax code allows you to exchange one life insurance policy for another life insurance policy, an endowment policy, an annuity, or a qualified long-term care policy without triggering current tax liability. This is known as an IRC Section 1035 exchange. You must follow IRS rules when making the exchange, particularly the requirement that the exchange must be made directly between the insurance company that issued the old policy and the company issuing the new policy or contract. Also, the rules governing 1035 exchanges are complex, and you may incur surrender charges from your current life insurance policy. In addition, you may be subject to new sales, mortality, expense, and surrender charges for the new policy, which can be very substantial and may last for many years afterward.

### Lower the premium

If the premium cost of your current life insurance policy is an issue, you may be able to reduce the death benefit, lowering the premium cost in the process. Or you can try to exchange your current policy for a policy with a lower premium cost. But you may not qualify for a new policy because of your age, health problems, or other reasons.

### Stream of income

You may be able to exchange the CSV of a permanent life insurance policy for an immediate annuity, which can provide a stream of income for a predetermined period of time or for the rest of your life. Each annuity payment will be apportioned between taxable gain and nontaxable return of capital. You should be aware that by exchanging the CSV for an annuity, you will be giving up the death benefit, and annuity contracts generally have fees and expenses, limitations, exclusions, and termination provisions. Also, any annuity guarantees are contingent on the claims-paying ability and financial strength of the issuing insurance company.

### Long-term care

Another potential option is to exchange your life insurance policy for a tax-qualified long-term care insurance (LTCI) policy, provided that the exchange meets IRC Section 1035 requirements. Any taxable gain in the CSV is deferred in the long-term care policy, and benefits paid from the tax-qualified LTCI policy are received tax free. But you may not be able to find a LTCI policy that accepts lump-sum premium payments, in which case you'd have to make several partial exchanges from the CSV of your existing life insurance policy to the long-term care policy provider to cover the annual premium cost.

A complete statement of coverage, including exclusions, exceptions, and limitations, is found only in the policy. It should be noted that carriers have the discretion to raise their rates and remove their products from the marketplace.

Life Insurance Options After Retirement  
Four Reasons Why People Spend Too Much  
Common Financial Wisdom: Theory vs. Practice  
Can I make charitable contributions from my IRA in 2016?

## Four Reasons Why People Spend Too Much

*You may be more likely to overspend on a particular purchase compared to other possible expenditures. According to research conducted by the Consumer Reports National Research Center, adults in the United States reported that they would spend money on the following throughout the year:*

- 54%--electronics
- 33%--appliances
- 27%--a car
- 23%--home remodeling

*Source: Consumer Reports, November 2014*

You understand the basic financial concepts of budgeting, saving, and monitoring your money. But this doesn't necessarily mean that you're in control of your spending. The following reasons might help explain why you sometimes break your budget.

### 1. Failing to think about the future

It can be difficult to adequately predict future expenses, but thinking about the future is a key component of financial responsibility. If you have a tendency to focus on the "here and now" without taking the future into account, then you might find that this leads you to overspend.

Maybe you feel that you're acting responsibly simply because you've started an emergency savings account. You might feel that it will help you cover future expenses, but in reality it may create a false sense of security that leads you to spend more than you can afford at a given moment in time.

Remember that the purpose of your emergency savings account is to be a safety net in times of financial crisis. If you're constantly tapping it for unnecessary purchases, you aren't using it correctly.

Change this behavior by keeping the big picture in perspective. Create room in your budget that allows you to spend discretionary money and use your emergency savings only for true emergencies. By having a carefully thought-out plan in place, you'll be less likely to overspend without realizing it.

### 2. Rewarding yourself

Are you a savvy shopper who rarely splurges, or do you spend too frequently because you want to reward yourself? If you fall in the latter category, your sense of willpower may be to blame. People who see willpower as a limited resource often trick themselves into thinking that they deserve a reward when they are able to demonstrate a degree of willpower. As a result, they may develop the unhealthy habit of overspending on random, unnecessary purchases in order to fulfill the desire for a reward.

This doesn't mean that you're never allowed to reward yourself--you just might need to think of other ways that won't lead to spending too much money. Develop healthier habits by rewarding yourself in ways that don't cost money, such as spending time outdoors, reading, or meditating. Both your body and your wallet will thank you.

If you do decide to splurge on a reward from time to time, do yourself a favor and plan your purchase. Figure out how much it will cost ahead of time so you can save accordingly instead of tapping your savings. Make sure that your reward, whether it's small or big, has a purpose and is meaningful to you. Try scaling back. For example, instead of dining out every weekend, limit this expense to once or twice a month. Chances are that you'll enjoy going out more than you did before, and you'll feel good about the money you save from dining out less frequently.

### 3. Mixing mood with money

Your emotional state can be an integral part of your ability to make sensible financial decisions. When you're unhappy, you might not be thinking clearly, and saving is probably not your first priority. Boredom or stress also makes it easy to overspend because shopping serves as a fast and easy distraction from your feelings. This narrow focus on short-term happiness might be a reason why you're spending more than normal.

Waiting to spend when you're happy and thinking more positively could help shift your focus back to your long-term financial goals. Avoid temptations and stay clear of stores if you feel that you'll spend needlessly after having an emotionally challenging day. Staying on track financially (and emotionally) will benefit you in the long run.

### 4. Getting caught up in home equity habits

Do you tend to spend more money when the value of your assets--particularly your property--increases? You might think that appreciating assets add to your spending power, thus making you feel both wealthier and more financially secure. You may be tempted to tap into your home equity, but make sure you're using it wisely.

Instead of thinking of your home as a piggy bank, remember it's where you live. Be smart with your home equity loan or line of credit--don't borrow more than what is absolutely necessary. For example, you may need to borrow to pay for emergency home repairs or health expenses, but you want to avoid borrowing to pay for gratuitous luxuries that could put you and your family's financial security at risk. After all, the lender could foreclose if you fail to repay the debt, and there may be closing costs and other charges associated with the loan.

## Common Financial Wisdom: Theory vs. Practice

*It might not always be possible to follow some common financial wisdom.*

*Note: All investing involves risk, including the possible loss of principal, and there can be no assurance that any investment strategy will be successful.*

In the financial world, there are a lot of rules about what you *should* be doing. In theory, they sound reasonable. But in practice, it may not be easy, or even possible, to follow them. Let's look at some common financial maxims and why it can be hard to implement them.

### Build an emergency fund worth three to six months of living expenses

**Wisdom:** Set aside at least three to six months worth of living expenses in an emergency savings account so your overall financial health doesn't take a hit when an unexpected need arises.

**Problem:** While you're trying to save, other needs--both emergencies and non-emergencies--come up that may prevent you from adding to your emergency fund and even cause you to dip into it, resulting in an even greater shortfall. Getting back on track might require many months or years of dedicated contributions, leading you to decrease or possibly stop your contributions to other important goals such as college, retirement, or a down payment on a house.

**One solution:** Don't put your overall financial life completely on hold trying to hit the high end of the three to six months target. By all means create an emergency fund, but if after a year or two of diligent saving you've amassed only two or three months of reserves, consider that a good base and contribute to your long-term financial health instead, adding small amounts to your emergency fund when possible. Of course, it depends on your own situation. For example, if you're a business owner in a volatile industry, you may need as much as a year's worth of savings to carry you through uncertain times.

### Start saving for retirement in your 20s

**Wisdom:** Start saving for retirement when you're young because time is one of the best advantages when it comes to amassing a nest egg. This is the result of compounding, which is when your retirement contributions earn investment returns, and then those returns produce earnings themselves. Over time, the process can snowball.

**Problem:** How many 20-somethings have the financial wherewithal to save earnestly for retirement? Student debt is at record levels, and young adults typically need to budget for rent, food, transportation, monthly utilities, and cell phone bills, all while trying to contribute to an emergency fund and a down payment fund.

**One solution:** Track your monthly income and expenses on a regular basis to see where your money is going. Establish a budget and try to

live within your means, or better yet *below* your means. Then focus on putting money aside in your workplace retirement plan. Start by contributing a small percentage of your pay, say 3%, to get into the retirement savings habit. Once you've adjusted to a lower take-home amount in your paycheck (you may not even notice the difference!), consider upping your contribution little by little, such as once a year or whenever you get a raise.

### Start saving for college as soon as your child is born

**Wisdom:** Benjamin Franklin famously said there is nothing certain in life except death and taxes. To this, parents might add college costs that increase every year without fail, no matter what the overall economy is doing. As a result, new parents are often advised to start saving for college right away.

**Problem:** New parents often face many other financial burdens that come with having a baby; for example, increased medical expenses, baby-related costs, day-care costs, and a reduction in household income as a result of one parent possibly cutting back on work or leaving the workforce altogether.

**One solution:** Open a savings account and set up automatic monthly contributions in a small, manageable amount--for example, \$25 or \$50 per month--and add to it when you can. When grandparents and extended family ask what they can give your child for birthdays and holidays, you'll have a suggestion.

### Subtract your age from 100 to determine your stock percentage

**Wisdom:** Subtract your age from 100 to determine the percentage of your portfolio that should be in stocks. For example, a 45-year-old would have 55% of his or her portfolio in stocks, with the remainder in bonds and cash.

**Problem:** A one-size-fits-all rule may not be appropriate for everyone. On the one hand, today's longer life expectancies make a case for holding even more stocks in your portfolio for their growth potential, and subtracting your age from, say, 120. On the other hand, considering the risks associated with stocks, some investors may not feel comfortable subtracting their age even from 80 to determine the percentage of stocks.

**One solution:** Focus on your own tolerance for risk while also being mindful of inflation. Consider looking at the historical performance of different asset classes. Can you sleep at night with the investments you've chosen? Your own peace of mind trumps any financial rule.

ContourFinancial.com

This is a resource that will answer your most important financial question, namely:

- If employed – When can I retire?
- If not employed – Can I stay retired?

Contour Financial will answer this question, suggest alternative scenarios, if needed, and implement investment strategies in order to reach your objectives.

Customized strategies are developed and implemented. Personalized service is provided by Certified Financial Planners (CFP) and/or Certified Public Accountants (CPA) to clients. Investment, retirement, tax planning & preparation, estate, insurance, cash flow and education planning are all integral parts to the process.

Contour Financial is a private wealth management business located in Orland Park, Illinois. We work primarily with middle income and wealthy clients. As a long-term National Association of Personal Financial Advisors (NAPFA) fee-only firm, all compensation is fully disclosed. For clients seeking investment management by our firm, assets are held at Charles Schwab Institutional, an industry leader.

## Can I make charitable contributions from my IRA in 2016?

Yes, if you qualify. The law authorizing qualified charitable distributions, or QCDs, has recently been made

permanent by the Protecting Americans from Tax Hikes (PATH) Act of 2015.

You simply instruct your IRA trustee to make a distribution directly from your IRA (other than a SEP or SIMPLE) to a qualified charity. You must be 70½ or older, and the distribution must be one that would otherwise be taxable to you. You can exclude up to \$100,000 of QCDs from your gross income in 2016. And if you file a joint return, your spouse (if 70½ or older) can exclude an additional \$100,000 of QCDs. But you can't also deduct these QCDs as a charitable contribution on your federal income tax return--that would be double dipping.

QCDs count toward satisfying any required minimum distributions (RMDs) that you would otherwise have to take from your IRA in 2016, just as if you had received an actual distribution from the plan. However, distributions (including RMDs) that you actually receive from your IRA and subsequently transfer to a charity cannot qualify as QCDs.

For example, assume that your RMD for 2016 is \$25,000. In June 2016, you make a \$15,000 QCD to Qualified Charity A. You exclude the \$15,000 QCD from your 2016 gross income. Your \$15,000 QCD satisfies \$15,000 of your \$25,000 RMD. You'll need to withdraw another \$10,000 (or make an additional QCD) by December 31, 2016, to avoid a penalty.

You could instead take a distribution from your IRA and then donate the proceeds to a charity yourself, but this would be a bit more cumbersome and possibly more expensive. You'd include the distribution in gross income and then take a corresponding income tax deduction for the charitable contribution. But the additional tax from the distribution may be more than the charitable deduction due to IRS limits. QCDs avoid all this by providing an exclusion from income for the amount paid directly from your IRA to the charity--you don't report the IRA distribution in your gross income, and you don't take a deduction for the QCD. The exclusion from gross income for QCDs also provides a tax-effective way for taxpayers who don't itemize deductions to make charitable contributions.

## Can I name a charity as beneficiary of my IRA?

Yes, you can name a charity as beneficiary of your IRA, but be sure to understand the advantages and disadvantages.

Generally, a spouse, child, or other individual you designate as beneficiary of a traditional IRA must pay federal income tax on any distribution received from the IRA after your death. By contrast, if you name a charity as beneficiary, the charity will not have to pay any income tax on distributions from the IRA after your death (provided that the charity qualifies as a tax-exempt charitable organization under federal law), a significant tax advantage.

After your death, distributions of your assets to a charity generally qualify for an estate tax charitable deduction. In other words, if a charity is your sole IRA beneficiary, the full value of your IRA will be deducted from your taxable estate for purposes of determining the federal estate tax (if any) that may be due. This can also be a significant advantage if you expect the value of your taxable estate to be at or above the federal estate tax exclusion amount (\$5,450,000 for 2016).

Of course, there are also nontax implications. If you name a charity as sole beneficiary of your IRA, your family members and other loved ones will obviously not receive any benefit from those IRA assets when you die. If you would like to leave some of your assets to your loved ones and some assets to charity, consider leaving your taxable retirement funds to charity and other assets to your loved ones. This may offer the most tax-efficient solution, because the charity will not have to pay any tax on the retirement funds.

If retirement funds are a major portion of your assets, another option to consider is a charitable remainder trust (CRT). A CRT can be structured to receive the funds free of income tax at your death, and then pay a (taxable) lifetime income to individuals of your choice. When those individuals die, the remaining trust assets pass to the charity. Finally, another option is to name the charity and one or more individuals as co-beneficiaries. (Note: There are fees and expenses associated with the creation of trusts.)

The legal and tax issues discussed here can be quite complex. Be sure to consult an estate planning attorney for further guidance.
